Simply Everything

From Cameo Silhouette to embroidery software

by

Diana Cedolia.

Cameo will not let you save an image to export. They are very proprietary.
So you have to work around the restriction.

There are 3 ways to do this.

1: Let the Cameo cut out the fabric piece and then scan the cut fabric piece.
 You know the size of it when it is loaded it into digitizing software and then use
the imported image in digitizing software to digitize it. It works very well that way.

2: If you do not want to cut out the fabric right away. Get the cameo to print it
onto paper and then scan the print out back into your computer.

3: There are different programs available (some are free) that will save a print job
as a PDF so there is no need to physically print onto paper. Once the Cameo has
been told to print, use the print to PDF converter instead of actually printing on
paper.
Then use the PDF to JPG converter. Once you have the image as a JPG you
can then load it into your digitizing software.

I prefer the 3rd method as it does not involve any scanning. Everything is done
internally from Cameo to the computer so all the edges of the image stay very
clean.

This is one of the many Print to PDF programs. Cute PDF Writer.
